

## Stop valve NW 10 to 80 for water and oil max. 320 bar for block mounting and pipe mounting

### TECHNICAL DATA

Series AV 10-80 stop valves are operated by a handwheel. They were specially developed for water hydraulics. The stop valves can shut off the fluid flow from B to A or even from A to B. The stop valves are sealed by pressing two metal cones against one another. The max. working pressure must not exceed 320 bar.

#### Special features

The stop valves can be operated under pressure. Stop valves of this type are almost insensitive with regard to the high flow speeds occurring in hydraulic press water systems. All wear parts are made of corrosion resistant materials, are easy to access and fast to replace. The mounting position can be freely chosen.
